Language Assessment Solutions

For Colleges, Universities, and Language Schools

“With OWL, raters in the U.S. can now access results the day after students take a test in Egypt. We now have results much more quickly than we could before.”

Less Time Testing and Scoring; More Time Teaching

OWL Testing Software is authorable software that lets you build a custom assessment program around your curriculum and standards. Students, instructors, raters, and administrators can use the software using a simple Web interface.

- AUTHOR & DELIVER customized high-stakes finals and placement exams; as well as media-rich homework assignments, classroom quizzes, chapter tests, practice activities, and more
- INCREASE accuracy and consistency of placement tests and exit exams for ESL/EFL, traditional, and non-traditional language programs—including LCTLs
- ELIMINATE tapes, tape recorders, disjointed recording software, email attachments, and manual file management for hassle-free SOPI-like tests
- MANAGE test scores easily and integrate with your student records system
- MEASURE student progress—accurately—over time and across languages
- COLLECT & ANALYZE data to evaluate curricula, teaching methods, and the longitudinal progress and strengths of your programs as a means for norming tests over time
- ADD FLEXIBILITY to testing dates and times

Solution Spotlight: State University

A leading state university—providing a forum for research and education in more than 19 linguistic and literary traditions—uses OWL Testing Software to assess the oral proficiency of students around the world.

When a major state university wanted to enhance its internationally-known foreign language curriculum and increase student success, they chose OWL Testing Software. Foreign language study at the university includes at least one semester studying abroad. The faculty and administration needed a way to test all of the communications skills—oral, aural, reading, and writing—of their students before, during, and after their trips overseas.

OWL Testing Software provides the means to create, administer, and rate those tests—including simulated oral proficiency interviews—from anywhere in the world. Now, for example, Spanish language students are tested and assessed, while they are traveling in Chile, by their professor who may be in his home, office, or another country. OWL Testing Software not only makes the testing and assessment easier to create and manage, it captures the critical data necessary to measure the long-term success of both student and program, across all languages.

OWL Testing Software is helping the university to attract, retain, and graduate language students who are better prepared to lead and compete in a global economy.
